LOGICTROL SERVICE CENTER BULLETIN

Date: February 26, 1979

Subject: 1979 Price List

To: All LOGICTROL Warranty and Associate Customer Service Centers

*all prices have gone up
20% to 40% depending on the item*

This revised parts price listing replaces all previous editions. This listing was designed to make parts orders as simple as possible.

The new computer part number is comprised of seven digits grouped as shown:

999-9999
Category Number

Category: Basic category of the part based on function and use as applicable to LOGICTROL. We presently have 95 categories rather than the 27 categories we had under the alpha-numeric system. With the new categories we can more efficiently group our parts together according to function. Location of a particular part is simplified by reference to the category index and determine which category would most logically define the function or use of the part. Scanning through the parts within that category you will find the particular part in question.

Number: The number within each of the categories is selected with the intention of grouping similar parts together in sub-categories. These sub-categories are not defined by numerical boundaries. However, similar parts are in numerical order closest to other parts of the same function or use.

The Index is grouped into basic category number ranges for simplified general location of part numbers. The Index groupings list page number(s), category number and description. Each page is marked with a tab which corresponds to the Index grouping. Also, an abbreviation explanation list is located below the Index.

An alphabetical listing is furnished on the back of the Index showing description, category, as well as page number(s).

In addition, the last pages of the Parts Price Listing includes a cross reference of the old alpha-numerical part numbers to aid you. We feel that this parts ordering system will aid us all in greater proficiency and with less aggravation.

Thank you,

Doris Haynes
