

KRAFT 6 VOLT 500 MILLIAMPERE HOUR BATTERY PACK

WIRING

Before attempting any hook-up to the battery pack, carefully check the wiring diagram and be sure to observe the manufacturer's instructions regarding hook-up to the equipment to be used with the pack.

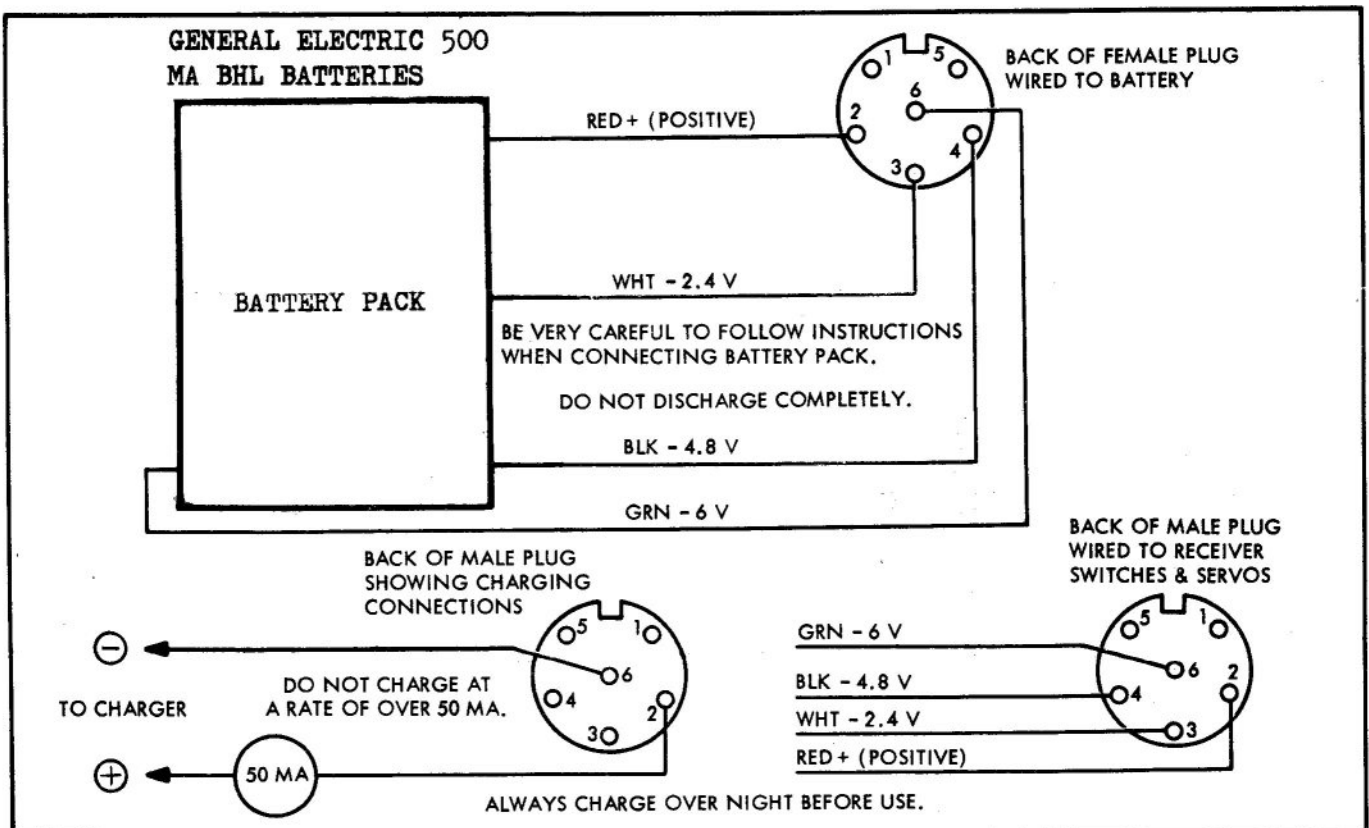

CHARGING

The pack should always be fully charged before use. Usually it is convenient to charge overnight before a flying session. If the pack has been purchased with the KRAFT charger, it is only necessary to plug it in for charging. The pack may be left on charge for a day or two without damage. If the pack is to be used with other chargers, be sure that your charger is designed to deliver NOT OVER 50 milliamps into a 6 volt pack. Also, be very sure when connecting the battery pack to the charger that proper polarity is observed. If the pack is not wired correctly to the charger, it may be completely ruined. Never discharge the pack completely or damage to the cells may result.

GUARANTEE

The KRAFT battery pack is guaranteed against defects in workmanship and materials for a period of 90 days from date of purchase. This guarantee does not cover packs damaged from improper use, excessive charging rates, or mechanical damage.
